

AUGUST 4, 2026

A closer look at whale communication

A new open research release from CAIRN Institute.
Data, models, and tools for studying humpback song.

WHAT'S INSIDE: CURATED DATA

Start with the song

Humpback recordings become a structured audio-token dataset.
Built so researchers can trace sound to sequence.

Listen across time

Two long-context neural audio models explore ways to connect local patterns with the shape of a song.

WHAT'S INSIDE: REPRODUCIBLE TOOLS

Make the work inspectable

```
inspect(model)
```

```
* architecture
```

```
* weights
```

```
* behavior
```

Release materials include code and tools for examining architecture, weight structure, and model behavior.
